

Highway Heavy Haul

‘A Walk in the Park’

Perkins was contracted to deliver very large and heavy bridge girders as part of a \$31,000,000.00, 2,573 foot river crossing between Minnesota and Wisconsin. A portion of the project involved delivery of girders through an existing county park located on the river. Perkins worked with city, county, and state agencies, as well as the DNR and utility companies to make the moves safely and with little disturbance of the surrounding wildlife.

Special thanks to the City of La Crosse Engineering, Street and Police Departments. Perkins would also like to thank Wisconsin's Forestry and Permit Departments, State Patrol, and the Police in the City of Campbell, plus many others involved in this project. The transportation of the girders went smoothly, on-schedule, and without incident because of the cooperation between all parties involved in the project.
